Education

University College London – Gatsby Computational Neuroscience Unit <i>PhD in Theoretical Neuroscience and Machine Learning (supervisor: Prof. Peter E. Latham)</i>	Sept. 2016 – Present London, UK
University College London – CoMPLEX <i>MRes in Modelling Biological Complexity (thesis supervisors: Dr. Marius Pachitariu & Prof. Matteo Carandini)</i>	Sept. 2015 – Sept. 2016 London, UK
Johns Hopkins University <i>BA in Cognitive Science (GPA 3.93/4.00, General Honors and Departmental Honors)</i>	Sept. 2011 – May 2015 Baltimore, MD, USA
Peabody Institute of The Johns Hopkins University <i>BM in Classical Guitar Performance (GPA 3.93/4.00, General Honors)</i>	Sept. 2011 – May 2015 Baltimore, MD, USA

Experience

Facebook Reality Labs CTRL <i>Research Intern</i> • Dimensionality reduction • Signal processing	Dec. 2020 – Present New York City, NY, USA
University College London, Gatsby Computational Neuroscience Unit <i>Ph.D. research (supervised by Prof. Peter E. Latham)</i> • Research on modeling the circuit mechanisms of biological motor learning • Analysis and simulation of recurrent neural networks • Development and analysis of algorithms for training recurrent neural networks • Validation of theoretical models by deriving experimental predictions about brain-machine interface learning and testing against previously published experimental data	Sep. 2016 – Present London, UK
Methods in Computational Neuroscience Summer School <i>Summer school research project (supervised by Prof. Haim Sompolinsky)</i> • Research on classification capacity of recurrent neural networks • Novel application of tools for quantifying classification capacity to recurrent networks	Aug. 2018 Woods Hole, MA, USA
University College London, Cortex Lab <i>Masters thesis research (supervised by Prof. Matteo Carandini & Dr. Marius Pachitariu)</i> • Research on visual responses in mouse primary visual cortex • Analysis of calcium imaging data	May – Aug. 2016 London, UK
Sainsbury Wellcome Centre, Kampff Lab <i>Masters rotation student (supervised by Dr. Adam Kampff & Dr. Goncalo Lopes)</i> • Research on understanding functional consequences of motor cortical lesions in rats • Event-related analysis of electrocorticographic (ECoG) recordings from rat motor cortex • Behavioral analysis involving extracting events from video recordings using computer vision techniques	May – Aug. 2016 London, UK
